Quiz: Module 1, Lesson 1.2

Questions

Question 1

What is Ollama and why is it recommended in the zero-cost tech stack?

A) A paid AI service that requires a subscription B) A tool that runs AI models locally on your own hardware for free C) A web-based chatbot interface D) A hardware component for AI processing

Question 2

Why is Discord recommended as a communication platform for AI agents?

A) It's the only platform that works with AI B) It's free, works well with bots, and can serve as a command center C) It has the most users of any platform D) It's owned by an AI company

Question 3

What is the purpose of n8n in the tech stack?

A) It's a paid alternative to Zapier with more features B) It's a free workflow automation platform that connects services C) It's a note-taking application D) It's a cloud storage service

Question 4

What is the recommended approach for starting with the zero-cost tech stack?

A) Install everything at once to have all features available B) Start with OpenClaw and a local model, add tools as you have specific needs C) Only install tools that cost money for better quality D) Wait until you need everything before starting

Question 5

What should you avoid when building your zero-cost tech stack?

A) Installing too few tools B) Over-tooling by installing tools you don't need yet C) Using any free tools at all D) Learning the tools before installing them

---

Answers

Question 1: B Ollama allows you to run powerful AI models locally on your own hardware for free, with no subscription required and complete privacy.

Question 2: B Discord is free, has excellent bot integration capabilities, works on mobile, and can serve as a command center for multiple agents.

Question 3: B n8n is a free, self-hosted workflow automation platform that connects hundreds of services without coding, making it more powerful than Zapier's free tier.

Question 4: B The recommended approach is to start minimal - just OpenClaw and a local model - and add tools only as you have specific, identified needs.

Question 5: B Avoid over-tooling - installing many tools you don't need yet. Start with the minimum and add tools only when you have identified specific needs.
