# Quiz: Module 2, Lesson 2.1 - Installing OpenClaw

## Questions

### Question 1

What are the essential requirements for installing OpenClaw?

A) A supercomputer and expensive GPU B) A computer with administrator access, internet connection, and 30-60 minutes C) A paid subscription to OpenClaw Pro D) A dedicated server room

### Question 2

What is the role of Ollama in the OpenClaw setup?

A) It's the main OpenClaw application B) It's a tool for running AI models locally on your hardware C) It's a cloud-based AI service D) It's a configuration management tool

### Question 3

Which command would you use to download your first AI model?

A) openclaw install llama3.2 B) ollama pull llama3.2 C) npm install llama3.2 D) model download llama3.2

### Question 4

What should you do if you get an "Out of memory" error when running a model?

A) Buy more RAM immediately B) Try a smaller model like phi3 C) Give up on local AI D) Reinstall OpenClaw

### Question 5

What is the recommended model for someone with limited hardware (8GB RAM, no GPU)?

A) llama3.1:8b B) mixtral C) phi3 D) command-r

---

## Answers

**Question 1: B** The essential requirements are a computer (Mac, Windows, or Linux), administrator access to install software, an internet connection for downloading components, and about 30-60 minutes of time.

**Question 2: B** Ollama is a tool that allows you to run AI models locally on your own hardware. It's the easiest way to get started with local AI models for OpenClaw.

**Question 3: B** The `ollama pull llama3.2` command downloads the specified model to your system so it can be used for AI interactions.

**Question 4: B** If you get an "Out of memory" error, try using a smaller, more efficient model like phi3 that can run on limited hardware.

**Question 5: C** For limited hardware (8GB RAM, no GPU), smaller models like phi3 (2B parameters) are recommended as they can run efficiently without requiring a GPU.
