Quiz: Module 2, Lesson 2.2 - Basic Configuration

Questions

Question 1

What is the purpose of the AGENTS.md file in OpenClaw?

A) To store your personal information B) To define how your agent should behave and work with you C) To list available AI models D) To configure network settings

Question 2

Which file would you edit to tell your AI agent about your work context and preferences?

A) IDENTITY.md B) config.yaml C) USER.md D) TOOLS.md

Question 3

What is the MEMORY.md file used for?

A) Storing temporary session data B) Defining the agent's personality C) Storing persistent information that should survive between sessions D) Configuring model parameters

Question 4

What should you do after making changes to your OpenClaw configuration files?

A) Reinstall OpenClaw completely B) Restart OpenClaw to apply the changes C) Delete the old configuration files D) No action is needed, changes apply automatically

Question 5

What is the recommended approach for configuring your AI agent?

A) Configure everything at once before using it B) Start simple and add complexity as needed C) Only use the default configuration D) Copy configuration from other users

---

Answers

Question 1: B The AGENTS.md file contains instructions for how your agent should behave, including operating rules, workflows, memory protocol, and boundaries.

Question 2: C USER.md is where you define who you are, your work context, communication preferences, and what you expect from the agent.

Question 3: C MEMORY.md stores long-term persistent information that the agent should remember between sessions, such as key facts, preferences, and ongoing projects.

Question 4: B After making changes to configuration files, you need to restart OpenClaw for the changes to take effect.

Question 5: B The recommended approach is to start with basic configuration, test it, and add more complexity as you understand what you need.
