Quiz: Module 2, Lesson 2.4 - Understanding Memory & Context

Questions

Question 1

What is the difference between short-term memory and long-term memory in AI agents?

A) Short-term memory is for numbers, long-term is for text B) Short-term memory exists within a session, long-term persists between sessions C) Short-term memory is larger, long-term is smaller D) There is no difference

Question 2

What type of information should be stored in MEMORY.md?

A) Temporary calculations and data B) Information from the current session only C) Key facts, preferences, decisions, and ongoing projects that should persist D) Random conversations for entertainment

Question 3

How often should you review and update your long-term memory?

A) Never, it should remain static B) Once per year C) Periodically, during regular maintenance sessions D) Every time you start a new conversation

Question 4

What are daily notes in the context of AI memory?

A) Notes you write by hand every day B) Auto-created files that capture session activity for recent context C) The same as long-term memory D) Instructions for the AI

Question 5

What happens to memory when your AI agent “wakes up” for a new session?

A) It starts completely fresh with no memory B) It loads configuration files, MEMORY.md, and recent daily notes C) It remembers everything from the beginning of time D) It only remembers what you explicitly saved

---

Answers

Question 1: B Short-term memory (conversation context) exists within a single session, while long-term memory (MEMORY.md) persists between sessions.

Question 2: C MEMORY.md should store key facts about you, your preferences, important decisions and their reasoning, ongoing projects, and information that should survive between sessions.

Question 3: C You should periodically review and update your long-term memory during maintenance sessions, removing outdated information and adding new important details.

Question 4: B Daily notes are auto-created files in the memory/ directory that capture what happened during each session, providing recent context when you start a new session.

Question 5: B When starting a new session, your AI agent loads configuration files for rules, MEMORY.md for persistent context, and recent daily notes for continuity.
