Quiz: Module 6, Lesson 6.1 - Agent-as-a-Service Model

Questions

Question 1

What does the Agent-as-a-Service model primarily sell?

A) Software subscriptions B) AI model access C) Implementation and ongoing support of automation systems D) Hardware

Question 2

What is a typical price range for a basic agent setup service?

A) $10-50$ B) $500-1,500$ C) $10,000-20,000$ D) $50,000+

Question 3

What should you look for in an ideal first client?

A) Someone who wants everything for free B) Someone overwhelmed with repetitive tasks who understands the value C) Someone who expects overnight transformation D) Someone with no budget

Question 4

What is value-based pricing?

A) Pricing based on what it costs you B) Pricing based on the value created for the client C) Pricing based on competitor prices D) Pricing randomly

Question 5

What is a key challenge when starting an Agent-as-a-Service business?

A) There are no challenges B) Scope creep, clients wanting everything immediately, and technical issues C) Too many clients D) Tools being too expensive

---

Answers

Question 1: C Agent-as-a-Service sells the implementation and ongoing support of AI automation systems, not software. Clients pay for your expertise and time.

Question 2: B A basic agent setup typically ranges from $500-1{,}500$ for single agent configuration with basic workflows and 30-day support.

Question 3: B Ideal clients are overwhelmed with repetitive tasks, understand the value of automation, have budget for professional services, and have realistic expectations.

Question 4: B Value-based pricing sets fees based on the value created for the client (time saved, money made, problems solved) rather than your costs or competitor prices.

Question 5: B Key challenges include scope creep (clients asking for more than agreed), clients wanting everything immediately, technical issues, and pricing pressure.
